

T-CUT Set

An Innovative and Cost-effective Solution

CUT Membrane Technology has expanded their range of products with a new replaceable membrane set. The T-CUT set consists of single membrane tubes and their associated seals, which enable cost-effective replacements to be fitted in your module.

A standard T-CUT set consists of 18 tubular membranes and 36 seals. This is ideally suited for use as cost-effective replacements in current modules. Other sets with different membrane materials and number of tubular membranes in the core (or insert) - including customized designs - are available.

High Filtrate Output with High Filtrate Quality

The T-CUT Set is produced in three standard lengths: 1,220 mm, 2,440mm and 3,660 mm.

Our tubular membranes are made from PES or PVDF and supported with a highly-stable non-woven fabric. This provides a robust, thermally and chemically stable membrane for food and beverage applications.

You will find the membrane areas listed in the table.

Technical Data T-CUT Set

Standard-Length	mm	1,220	2,440	3,660
Membrane Area ¹⁾	m ²	0.88	1.75	2.63
MWCO	kDa	50 - 200		
ID Membrane	mm	12.5		

¹⁾ The given membrane area is valid for a set of 18 membrane tubes in standard length.
